

“Natively monitor your network”

Want to visualize your network connections and alert on outages and performance problems, but don't want to pay per device?

OpsLogix introduces a native management pack for OpsMgr, for network monitoring. Easy, integrated and affordable — as it should be.

* Live visualization requires Savision Live Maps (free edition)

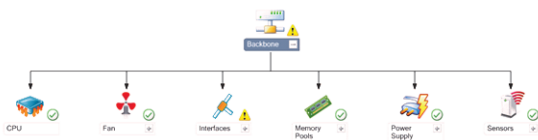

Network Monitoring

Network Monitoring

Every business relies on their network for providing their IT services.

Then why only monitor applications and IT services?

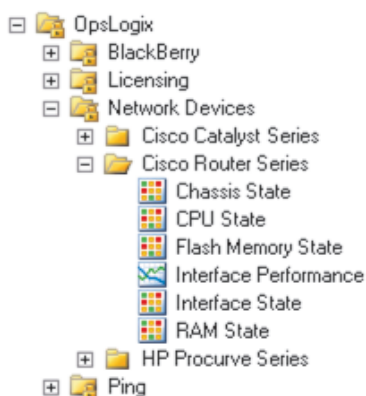

OpsLogix introduces a native management pack for Network monitoring for System Center Operations Manager. No more connectors and no more paying per device. Full integration — as it should be.

Intelligent network monitoring

OpsLogix intelligent management pack for Network monitoring, checks the status of your device and its components.

Both state and performance will be collected and presented through a full “class model”. Visualize even more with Savision Live Maps integration.

Easy and native

Our MP provides support for SNMP v1, v2 and v3. Using native features like discoveries and overrides and with our console add-in, you — as the admin — can easily monitor your network.

No more connectors or relying on external systems. Our solution is packaged in one native MP.

System Requirements

- System Center Operations Manager 2007 SP1 or higher
- Opslogix IMP for Network Monitoring
